

File Handling

1. `open(arg1,arg2)` → `arg1 =filename` , `arg2 = mode`

Modes →

`r` - read -default value

`a` - append - create the file if it does

not exist

`w` - write - - create the file if it does

not exist

`x` - create

`t` - text - default value

`b` - binary

2. `read()` - read the
3. Using the with statement
with `open("demofile.txt")` as `f`:
4. `readline()` - only return one line
5. delete a file → import `os` and then write `os.remove()`
6. to check if file exists - `os.path.exists()`
